# Historical Knowledge Production in Digital Environments

## Actual

# The CIDOC Conceptual Reference Model

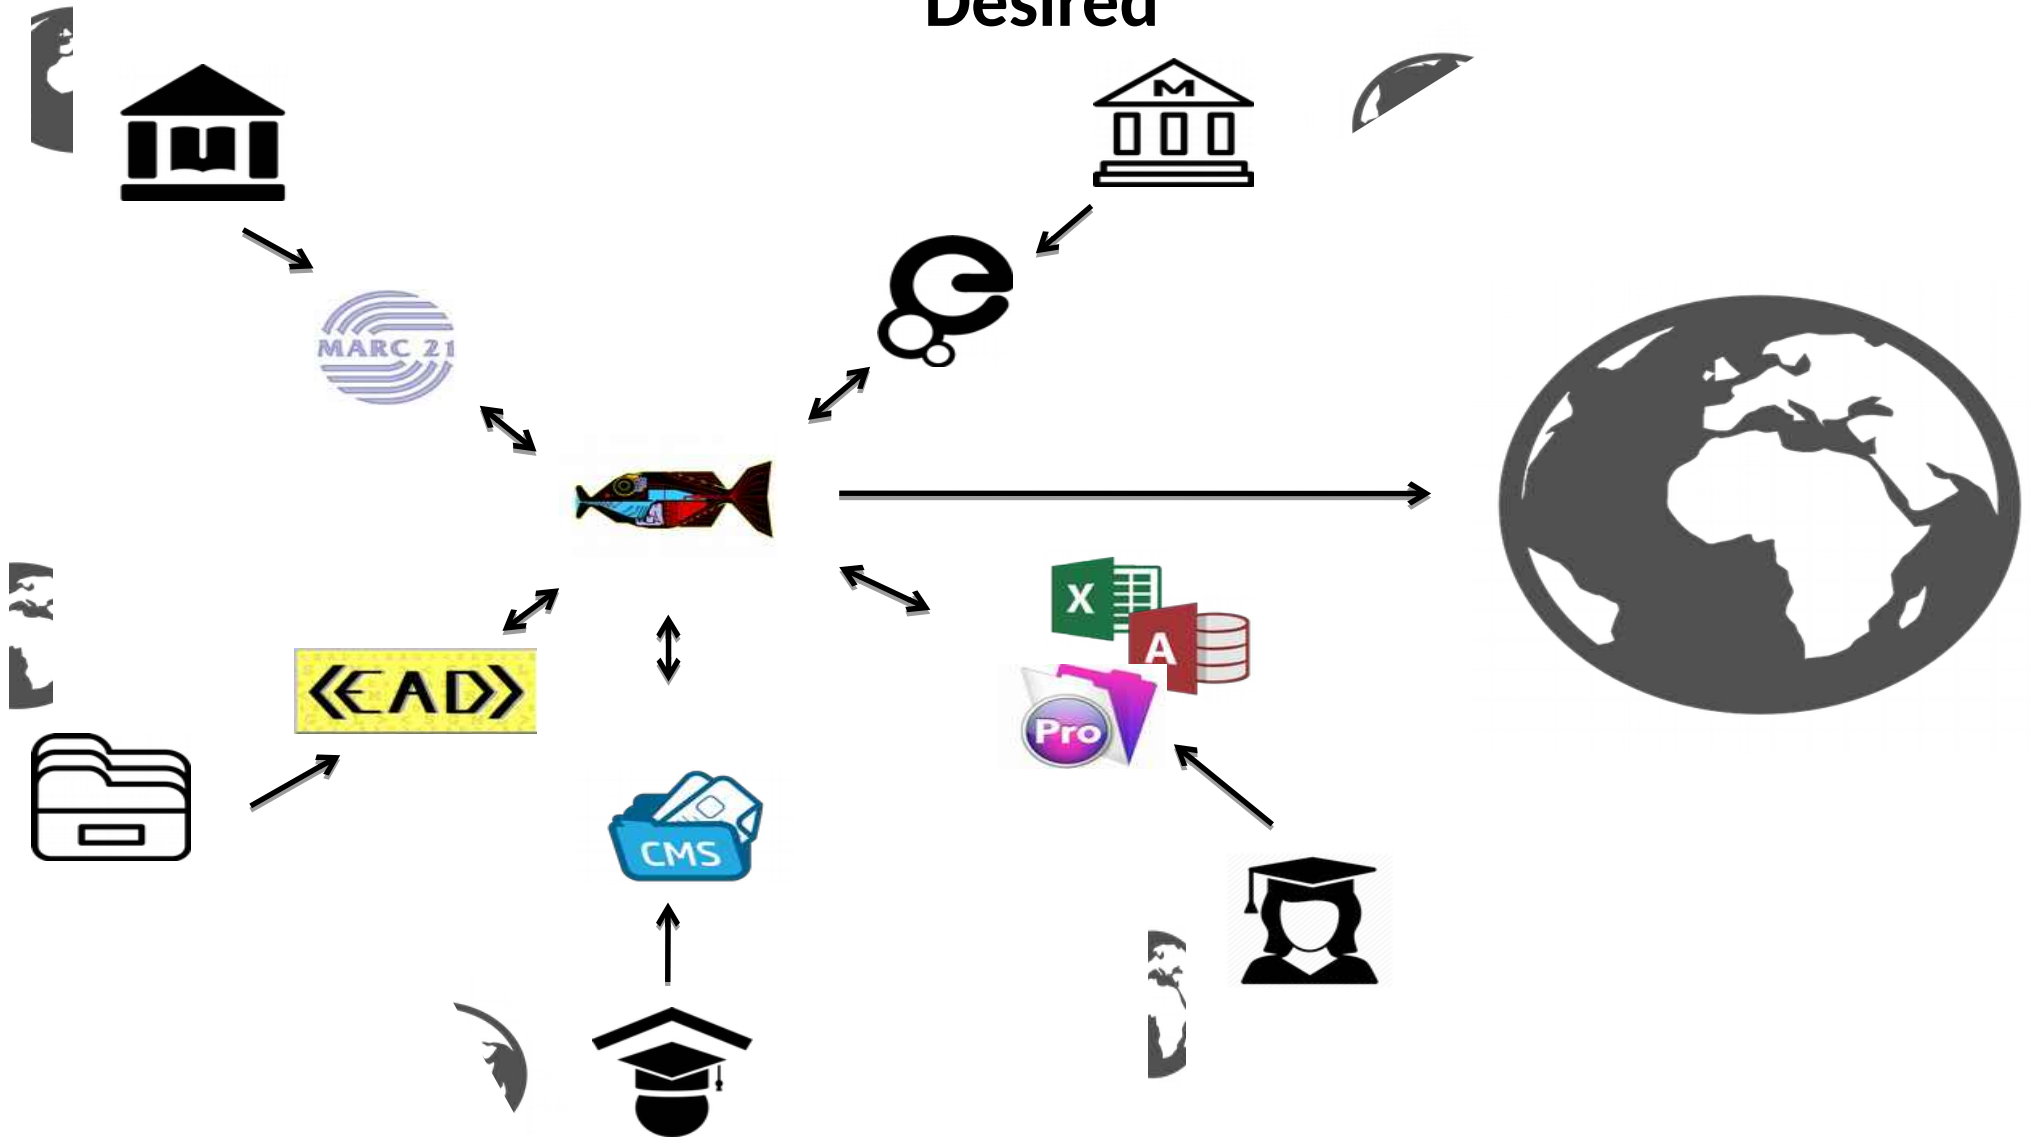

## What it is and what it does

- *a **core ontology** describing the underlying semantics of database schemata and structures from historical knowledge producing organizations and individuals.*
- *a **generic model of recording of “what has happened”** in human scale*
- ***generates huge, meaningful networks of knowledge by a simple abstraction:** history as meetings of people, things and information*
- *the **result of 20 years** of interdisciplinary work and agreement*

# Historical Knowledge Production in Digital Environments:

**Desired**

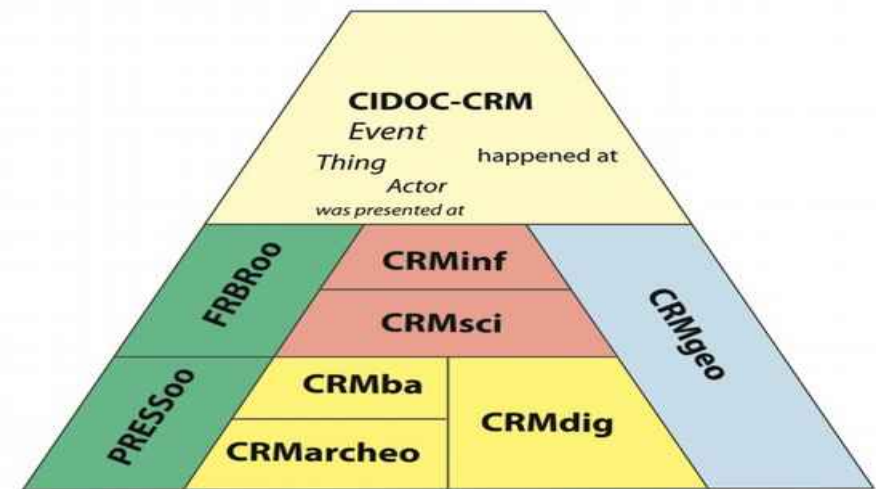

## Present State

Type	Top Level Ontology
Scope	Cultural Heritage and E-Sciences
Classes	90+-
Relations	150+-
Version	6
Maintained by	CIDOC CRM SIG
Official Extensions	8
Access	<a href="http://www.cidoc-crm.org/">http://www.cidoc-crm.org/</a>

### *CIDOC-CRM family of Models*

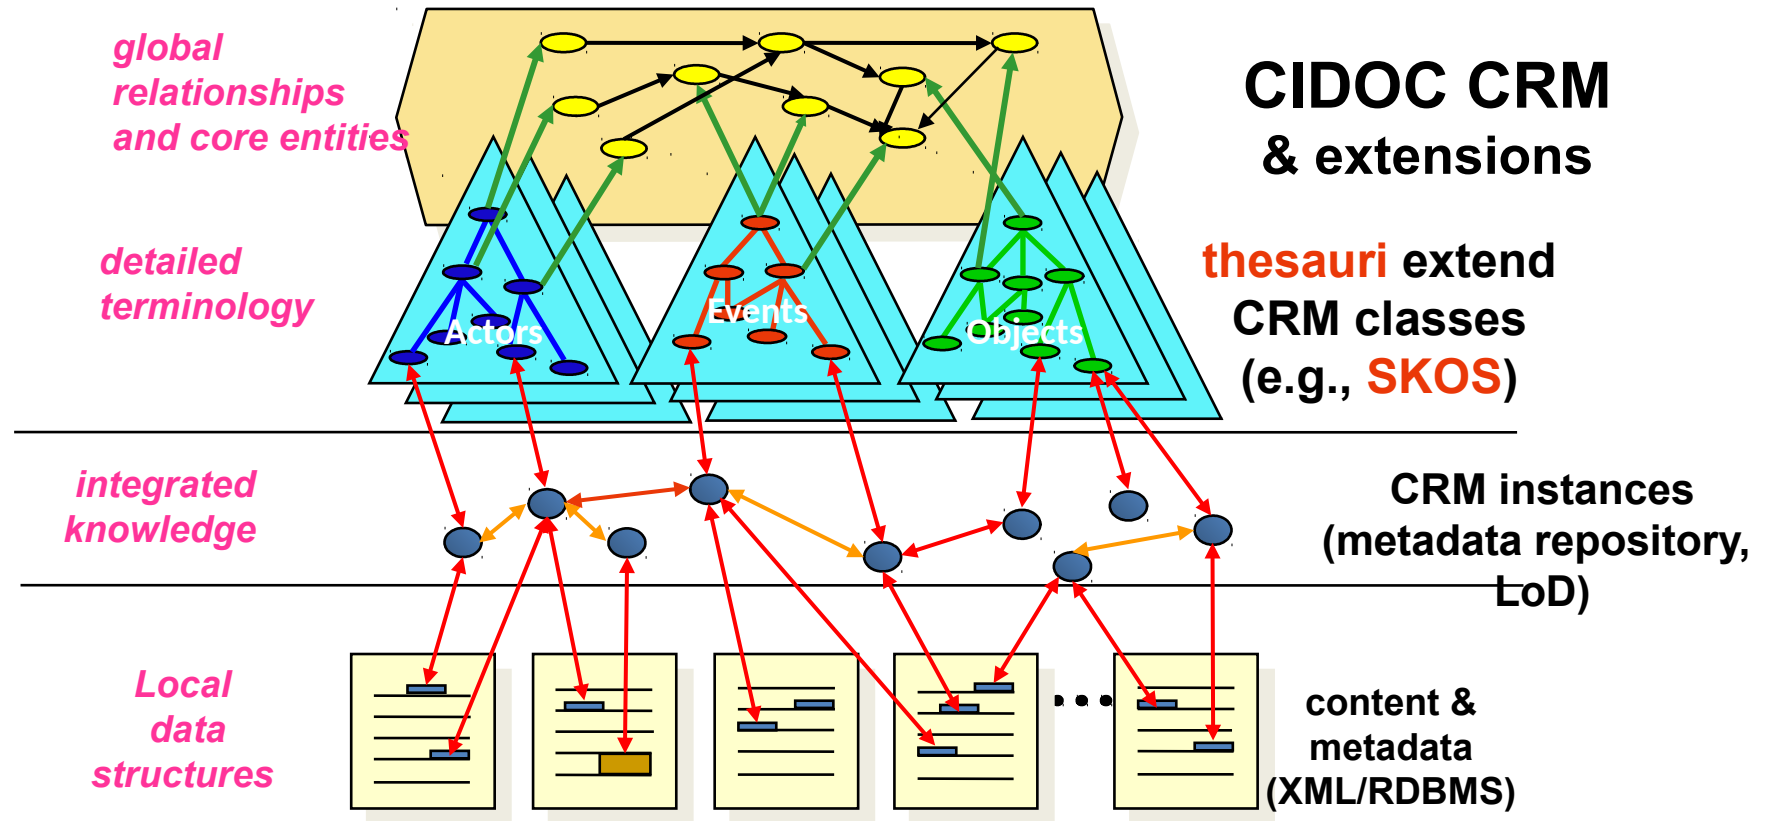

*High Recall harmonized to detailed knowledge practice modelling*

## Extensions

Name	Scope	Community of Practice	Version
CRMBase	CH and E Science	CH Specialists	6.2.2
FRBRoo	Bibliographic Data and Creative Processes	Librarians	2.4
PreSSoo	Serials Data	Librarians	1.2
CRMinf	Argumentation		0.7
CRMsci	E-sciences	Analytic heritage science community	1.2.4
CRMdig	Digitization processes	3D modelling community	3.2.1
CRMarchaeo	Excavation practice	Archaeologists	1.4.3
CRMba	Building archaeology	Archaeologists	1.4
CRMgeo	Geophysics and geolocation	Archaeologists and Geophysicists	1.2

## Function

- Support interoperability of mutually relevant data sources
- enable sourced and verifiable facts from datasets
- foster referenceability and reusability of data
- foster structured argumentation on top of facts

## Successful Implementations

### Museums/Institutions

The British Museum

RJKS MUSEUM

### European Networks

PARTHENOS

Pooling Activities, Resources and Tools  
for Heritage E-research Networking,  
Optimization and Synergies

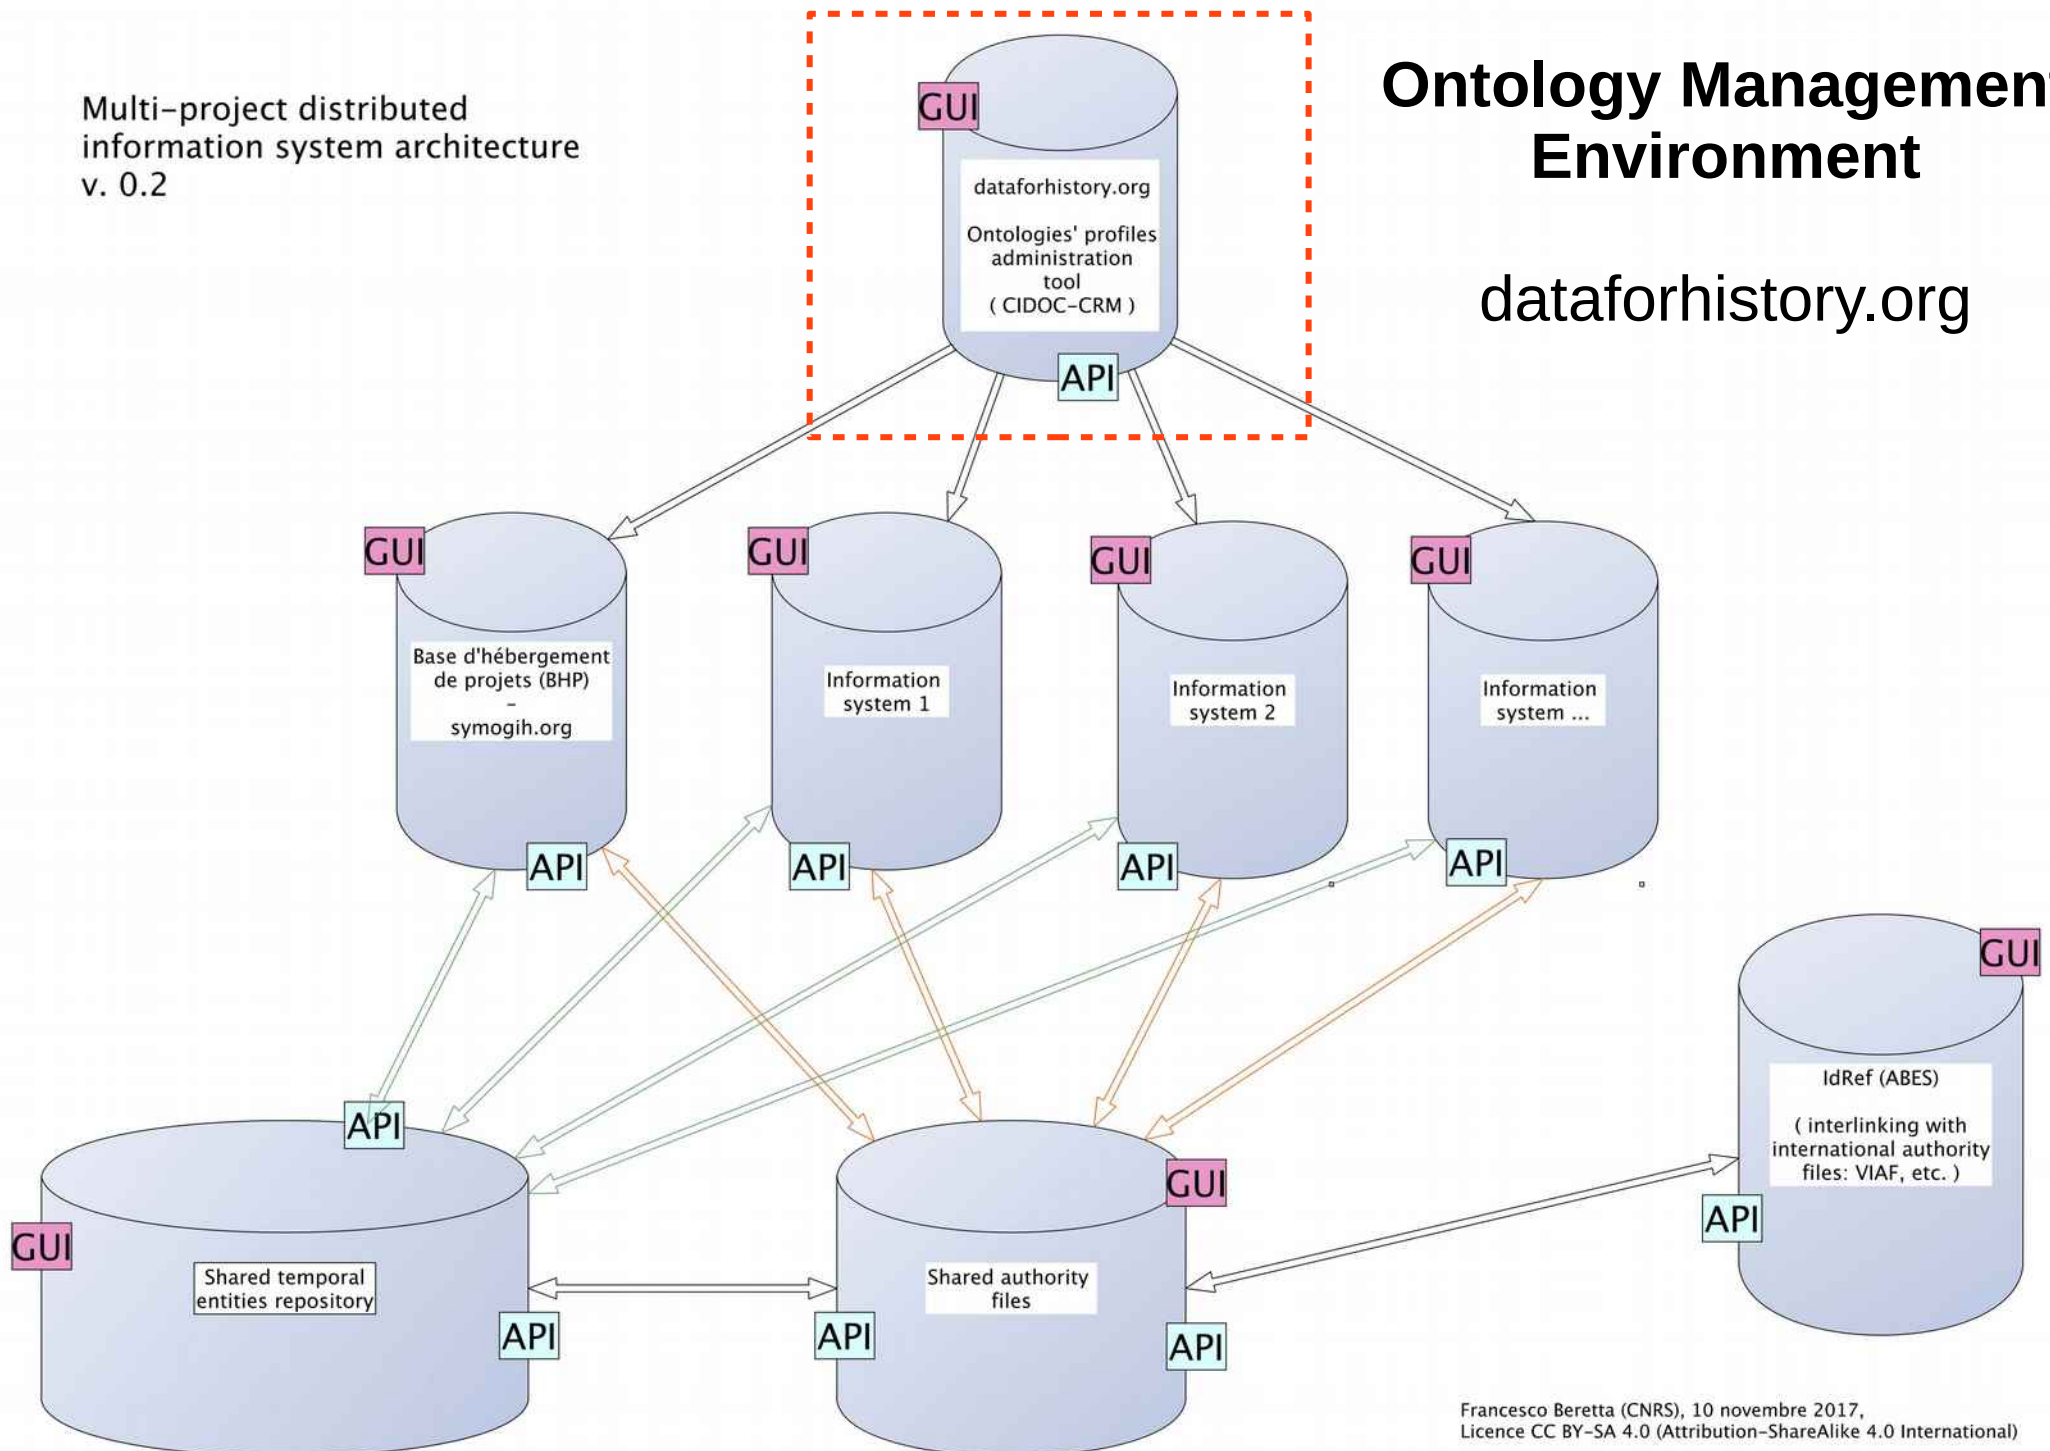

### Global

# Ontology Management Environment

dataforhistory.org

# The Research Infrastructure Challenge

Horizon 2020 Work Programme 2016 - 2017

“The EU framework for Research and Innovation, **Horizon 2020**, gives high importance to promoting **world-class-research infrastructures.**”

“Research infrastructures help to structure the scientific community and play a **key role in the construction of an efficient research and innovation environment.**”

They have an ability to **generate ‘a critical mass of people, knowledge and investment’.**

“**e-Infrastructures will make every European researcher *digital***, increasing creativity and efficiency of research and bridging the divide between developed and less developed regions”

# Information Integration as Key Aspect of RI Challenge

## What constitutes an RI?

1. Major Equipment
2. **Knowledge Resources**  
(collections, archives, scientific data)
3. E-Infrastructure  
(data and computing systems)

Can be:

Single Sited, **Virtual**, Distributed

To move towards meeting the intention of the above goals, an RI must consider and develop a strategy towards data integration.

An effective strategy to create integrated data resources is the only means to meet the goals of efficiency and open access to research and resources that are hallmarks of an RI in a digital age.

# Before Integration we need a picture of the world to be integrated

Services

Projects

Datasets

Software

Actors

Research  
Infrastructu  
res

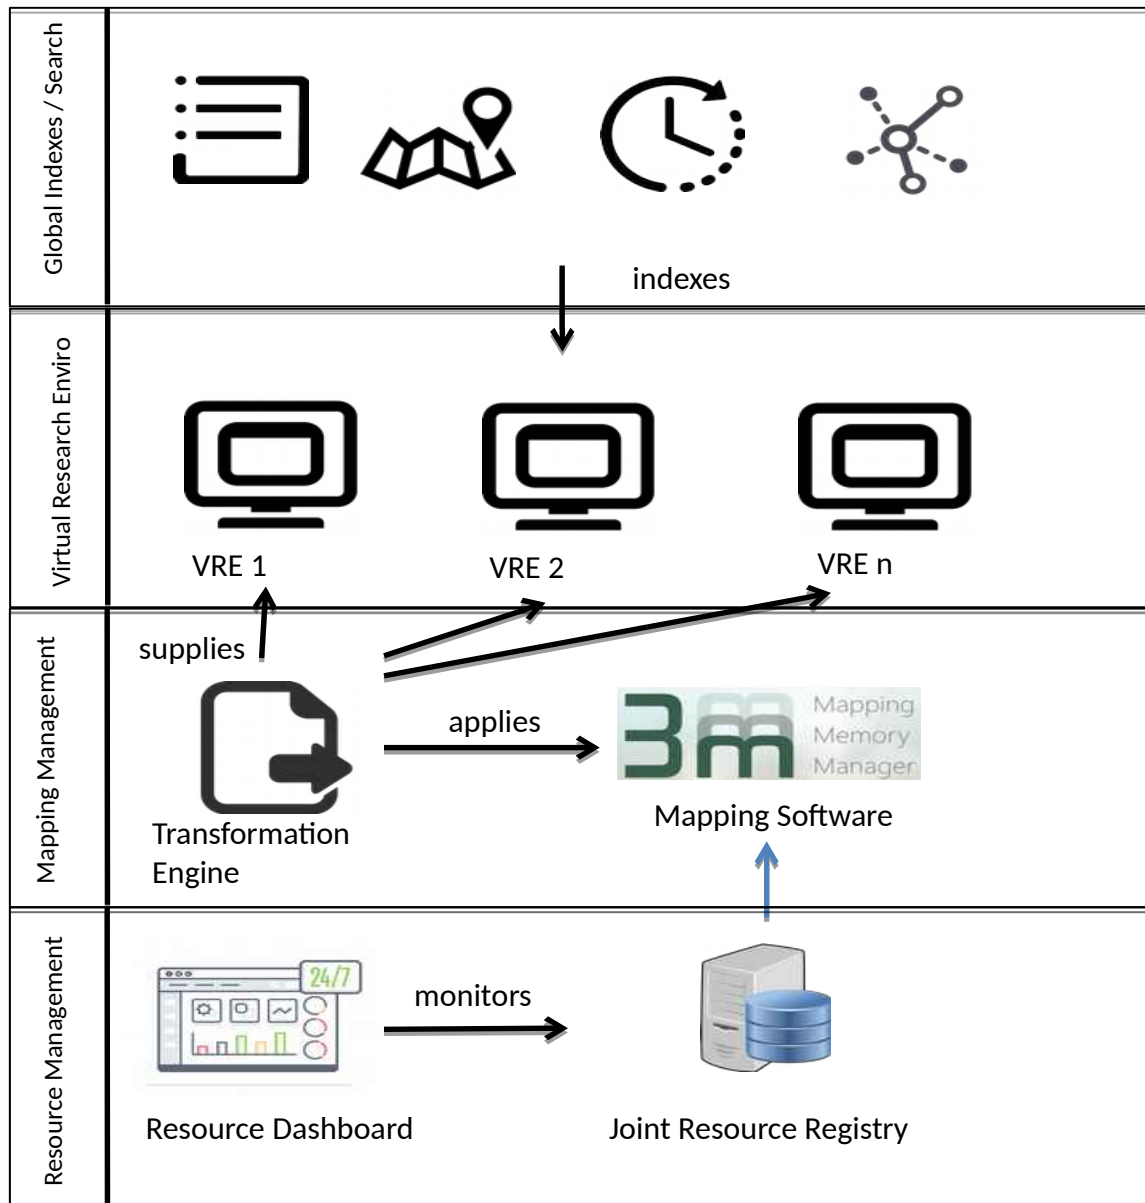

An adequate Data or Conceptual Model for Ris should provide a framework for describing and mapping basic relations that hold between:

Services, Actors, Projects, Datasets, Software, Research Infrastructures

This will **provide** not yet another aggregation but a **picture of the research infrastructure and information integration landscape itself to identify, support and build useful and sustainable aggregations.**

This picture serves the function of determining what has been integrated, where and by who and gives the ability to plan and managed the continuous activity of multiple integrations for different purposes

*Meta-metadata and the database of databases...*
